Title: Hotel Booking

Background

Build a website to service booking hotel online.

Program Specifications

In this assignment, you are requested to develop a booking website. You must use Filter as Controller and follow MVC2 model.

Features:

This system contains the following functions:

- Function 1: Login - 50 LOC
 - In order to booking, an authentication is required.
 - If the user has not authenticated, the system redirects to the registration page.
 - The actor enters userID and password, the function checks if the userID with the password is in the available user list, then grant the access permission. If not, a message would appear no notify that user is not found.
 - Login function is required for shopping.
- Function 2: Show all available room and Search room - 50 LOC
 - The screen lists all hotel which has an available room in the system.
 - Each hotel has some kind of room: single, double, family,...
 - Each room type has different price.
 - User can find the room based on hotel name or hotel area and check in date and check out date and amount of room.
 - All users can use this function (login is not required)
- Function 3: Register new account - 50 LOC
 - New user allows register new account with required information such as email as ID, phone, name, address, create date.
 - Current date is set default to create date field.
 - The default status of new user is active.
 - Password must be encrypted using SHA-256 before store in database.
- Function 4: Book Room - 150 LOC
 - All users can use this function except admin role (login is required)
 - User chooses room to booking cart.
 - Each user can book any available room in the list (not limit the amount room want to book)
 - User can view the selected room in the cart. For each room: hotel name, room type, amount, price, total. The screen must show the total amount of money of this cart.
 - User can remove the room from the cart. The confirm message will show before delete action.
 - User can update amount of each room in cart.

- User clicks the Confirm button to store the booking to database (must store the buy date time). The warning message will show if the selected room is out of stock.
 - During booking, user can enter the discount code (if any). Each discount code has its expiry date.
- Function 5: Show Booking history- 100 LOC
 - User can take over the booking history to list booking order by booking date.
 - System should support search function to search history by name or booking date
 - System also support delete function to delete the booking (system will update the status of booking to inactive).
- Function 6: Confirm Booking using email- 100 LOC (extra)
- Function 7: Feedback on the quality of room service - 50 LOC(Extra)
 - The user sends a feedback to the quality of the room he has booked.
 - Rating is performed only when the user has used the service.
 - Rating on a scale of: from 0 to 10.

* The above specifications are only basic information; you must build the application according to real requirements.

* You have to build your own database.

* The lecturer will explain the requirement only once on the first slot of the assignment.
